

# [ The most important pedagogical innovations for successful learning

# Did you say innovation?

- About pedagogical innovation
- Innovation and context
- Incremental innovation, disruptive innovation

**Aude SCHIAVI and Laurence NOTTELET are  
pleased to introduce you**

The logo for ÉLOCE, featuring the word in a stylized, modern font. The 'É' and 'E' have horizontal bars extending from them. The 'O' is a simple circle. The 'C' is a simple curve. The 'E' is a simple horizontal bar. The logo is displayed on a white rectangular background with rounded corners, which is set against a dark gray background. A green horizontal line is positioned below the white box.

**ÉLOCE**

**The future of the Corporate Universities**

**15 october 2021**

**Myth # 1. There is an ideal learning method!**

# Today should we only mobilize connectivism?

Conference *The Future of the Corporate University*, 15 October 2021

behaviorism	behaviorism	constructivism	socio-constructivism	connectivism
Début du XXè siècle	1956	1975	1985	2005
				
J. WATSON	G. MILLER & J. BRUNER	J. PIAGET	L. VYGOTSKY	G. SIEMENS & S. DOWNES
The acquisition of knowledge is done in successive stages via a positive reinforcement of the right answers and of the behaviors to be valued	The learner records information from outside, sorts it and reuses it when needed	The learner learns when he tries to understand his experience and appropriates the knowledge	Knowledge acquisition occurs through social interactions	We learn through all the interactions allowed by the networks
The "teacher" is the holder of the knowledge	the teacher is a learning manager	The teacher must recreate complex learning situations similar to those encountered by the learner in his professional life	The teacher must promote interactions between learners and debates	The teacher must appropriate the possibilities of new technologies to promote collaboration and the search for resources.
The learner is passive: it's an empty vase to fill	The learner is passive: his brain works like a computer	Learning is active. He builds his knowledge based on his experiences	The learner are active. They are autonomous in their learning but are part of a learning community	The learner is passive: it's an empty vase to fill

Each new period tends to outdated the previous methods considered ineffective and to overvalue the new approaches.

## Traditional pattern cartoon

# Over-valuation of the conectivist model : one best way approch

**Reality # 1. Built the most appropriate learning ecosystem  
for each situation**

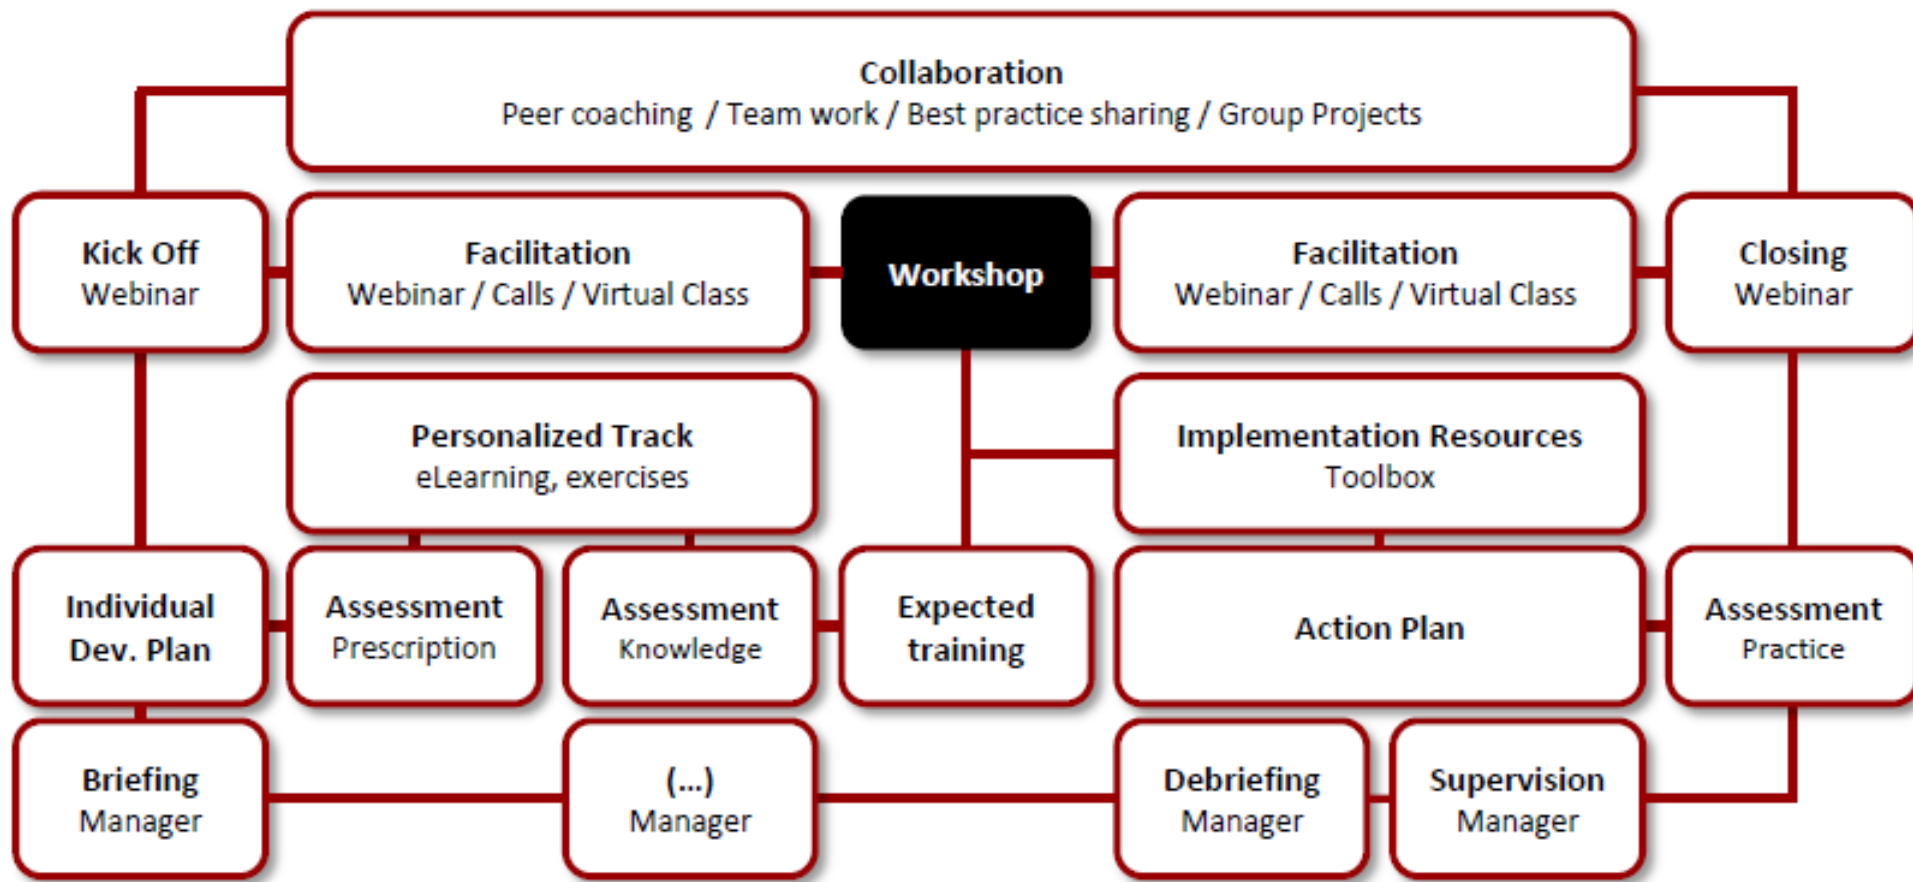

# Mobilize different learning modalities in a contextualized manner

Learn by **DOING**.

# example of a multimodal learning ecosystem

## **Myth # 2. You have to systematically adapt to your audience**

1. **Employees can't concentrate:  
use short sentences**
2. **They don't like reading: Using  
visuals**
3. **They don't like to be passive:  
make it interactive**
4. **They want to have fun: be fun**

Is it really a way to learn 21st century  
skills: critical thinking, serendipity,  
systems thinking, resilience, creativity ...

## Learning Skills

critical thinking

creativity

collaboration

communication

**Reality # 2. It's less a question of fun than a question of challenges**

# What cognitive science tells us

THE CORPORATE  
UNIVERSITY CLUB

**Pillar: The brain needs words and images**

**Pillar: The brain cannot process too much  
information at once**

**Pillar: The brain needs focused attention**

**Pillar: The brain needs to learn by trial and  
error**

**Pillar: The brain needs to be challenged**

# Find the flow challenges

**KNOW HOW TO LEARN:**  
**Methodology**

**WANT TO LEARN**

Perceived value (career, interest, etc.)

Perceived probability of success

**ABILITY TO LEARN**

Favorable context, weather, ...

**LEARNING**  
**COMPANY**

**Third myth. Innovation in learning must go through digital**

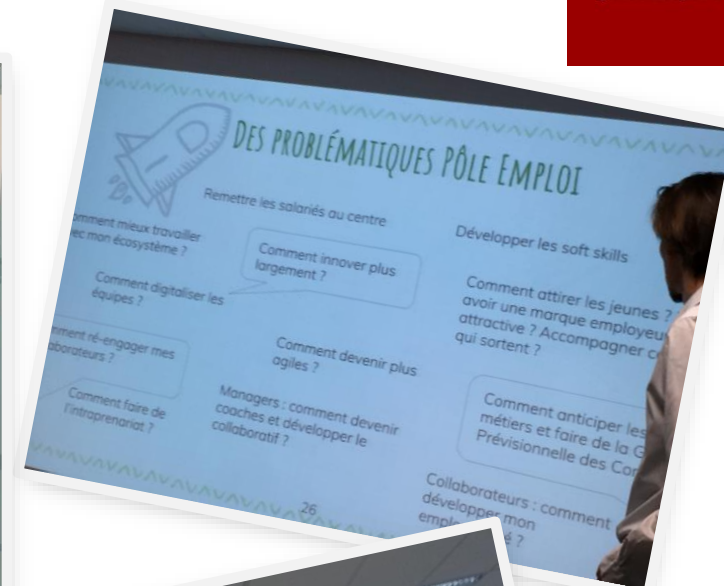

# From blended learning to hybridization

- The question is no longer whether or not to use “digital learning” in an L&D session, but more concretely how each pedagogical modality can best contribute to the acquisition of skills and how they can hybridize effectively with each other.

# Learn at work, learn together, become a teacher...

Conference  
The Future of  
the Corporate  
University, 15  
October 2021

**Fourth myth. We must transform employees into serial learners**

# Learning agility : Ability to learn from experience and apply those lessons successfully in new roles or activities

## KEY PSYCHOLOGICAL VARIABLES UNDERPINNING LEARNING AGILITY

1

**Openness to experience** – distinguishes imaginative, creative people from more conventional types. Those high on the openness-to-experience scale are intellectually curious. They tend to think and act in individualistic and non-conforming ways.

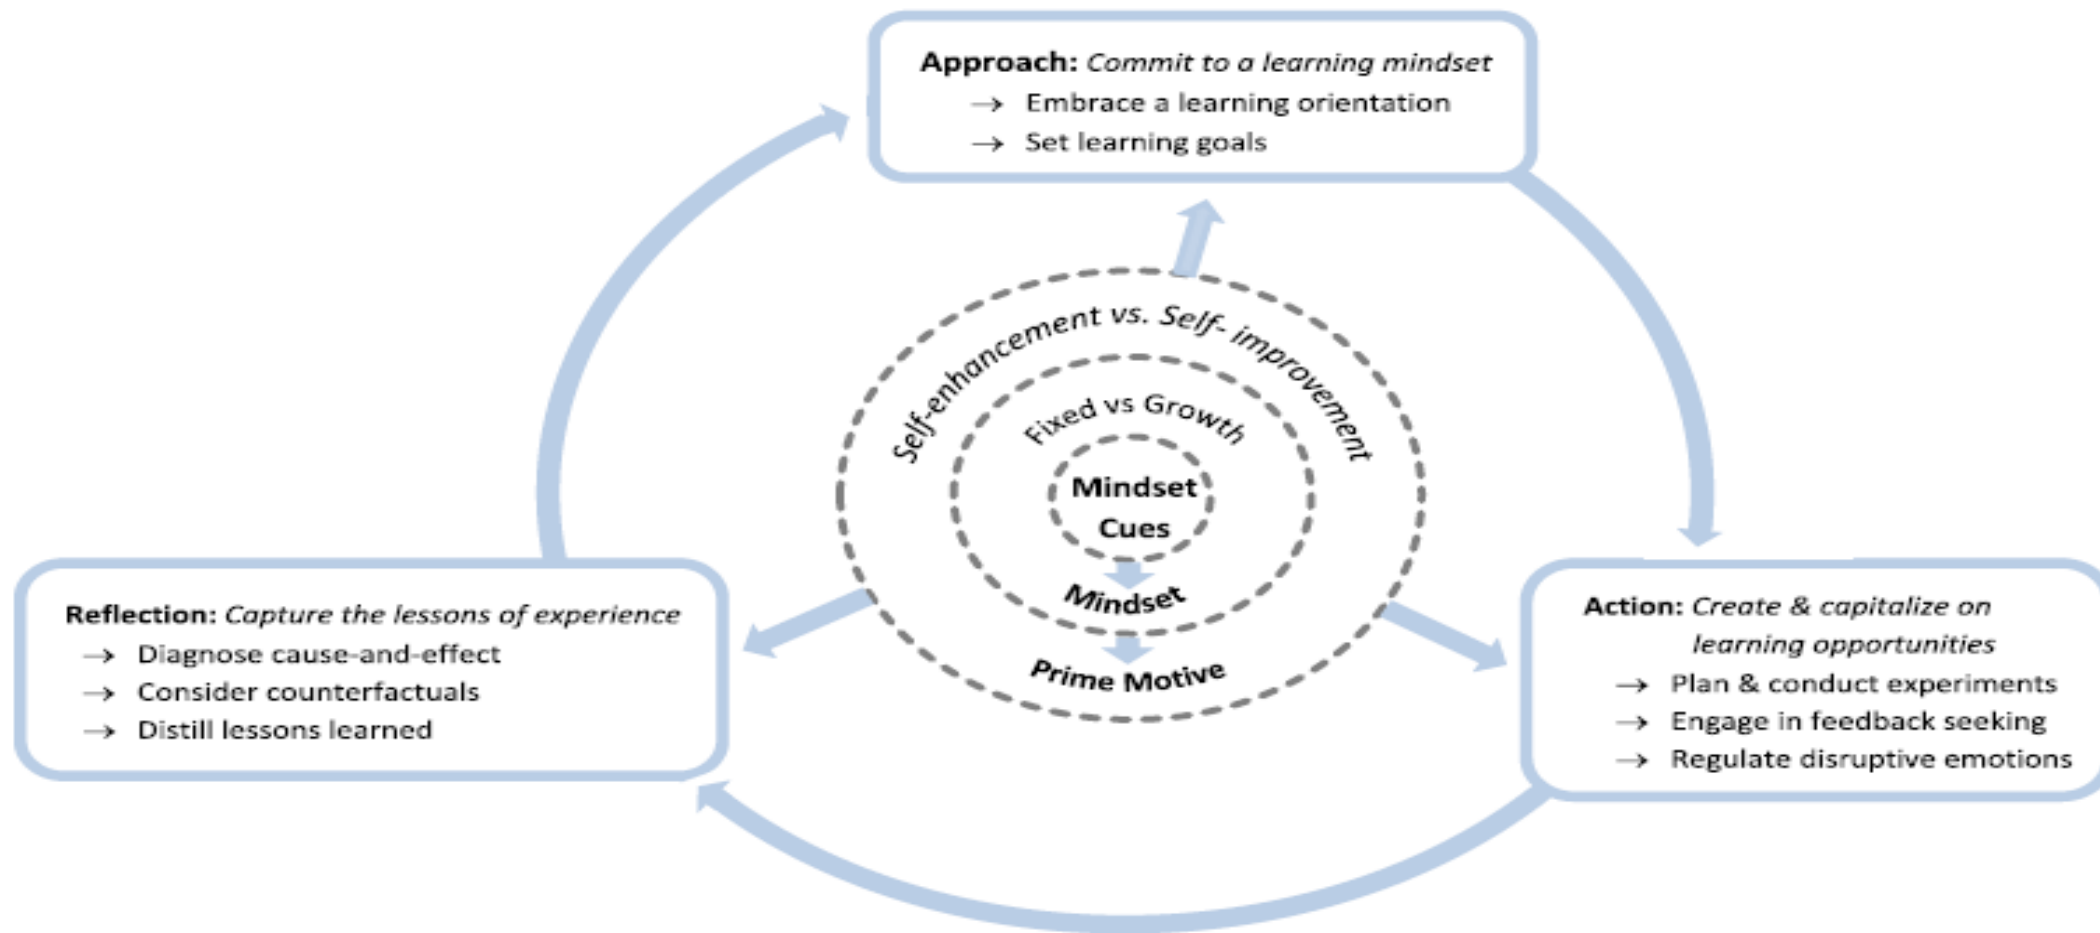

2

**Learning goal orientation** – distinguishes between people who focus on developing their competence by gaining new knowledge and skills, as opposed to performance-orientated individuals who focus their attention on performance standards and rewards.

3

**Abstract reasoning** – the ability to understand complex concepts and assimilate new information beyond previous experience.

# Develop a three-phase cycle that combine a cognitive, experiential and reflexive approach.

**Fig. 1.** The role of mindset cues and mindsets in leaders being in learning mode, as mediated by motives.

# Link between Learning agility and the performance of a leader or his potential

**FIGURE 1**  
**RELATIONSHIP BETWEEN JOB PERFORMANCE AND OTHER**  
**INDIVIDUAL ATTRIBUTES**

Learning agility is highly related to both leader performance (0,74) et leader potentiel (0,75).

Effective leaders possess higher levels of learning agility than their low-learning agile counterparts

- *Learning agility is a set of behaviors or competencies that can be observed and assessed. **Because it is behavior-based, learning agility can be developed:***
  - *Unlike a measure such as IQ, **learning agility is not static** and a motivated person can increase his or her learning agility.*
- *With learning agility, a person can better differentiate talent and develop it in a way that will fit personal career aspirations and benefit the organization as a whole.*

## Exhibit 4 - Segmenting HR Topics by Current Capabilities and Future Importance Identifies People Management Priorities

## Five imperatives for the future of HR

### Deeply personalized experience-centric design

### Skills at the core

### Data-driven decision making powered by AI

### Agile practices

### Transparency to preserve trust

**Level of importance to future of HR**

**Level of achievement today**

## META COMPETENCIES

## HARD SKILLS

## CREATE DREAM TEAMS

Create a team (coalition, ecosystem) of multidisciplinary individuals,  
each with specific expertise but with variable geometry.

# Innovation fields for learning (1)

- Individual  
Customisation of learning (e.g. AI, memory anchoring)
- Massification  
Various digital contents (e.g. MOOCs)
- Collective & social  
Social learning (e.g. learning communities, mentoring, e-tutoring, e-AFEST)
- Classroom  
Augmented classroom (e.g. board games, various digital activities, virtual and augmented reality)

# Innovation fields for learning (1)

- Individual  
Customisation of learning (e.g. AI, memory anchoring)
- Massification  
Various digital contents (e.g. MOOCs)
- Collective & social  
Social learning (e.g. learning communities, mentoring, e-tutoring, e-AFEST)
- Classroom  
Augmented classroom (e.g. board games, various digital activities, virtual and augmented reality)

# Innovation fields for learning (2)

- Distance learning  
Virtual classroom and various synchronous modalities
- Connected to field  
Training-action, project mode (e.g. certification courses)
- Blended  
Alternating teaching activities (synchronous/asynchronous, face-to-face/distance)
- Anticipated  
Analysis of data for training planning and delivery

THANK YOU!
